

## MONTGOMERY MADE TO MEASURE VERTICAL BLINDS

Easy to use and highly versatile, Vertical Blinds offer perhaps the most flexible shading option of any window furnishing.

Vertical blinds can be drawn neatly back to the side to offer you unlimited views while the vertical louvres can be rotated through 180 degrees to allow just the right amount of light into the room and maintain an element of privacy. Our vertical blind fabric options offered provide an array of designs, colours and textures second to none.

Our range of Vertical Blinds includes beautiful jacquard weaves and designs in contemporary colourways, enhanced with some seductive suedes, exotic grass effects and organic natural hues that will enable you to create window blinds with distinction. Our wonderful vertical blind fabrics are available as either 89mm (3½ inch) or 127mm (5 inch) louvres and your blinds will be tailor-made to meet your selection requirements

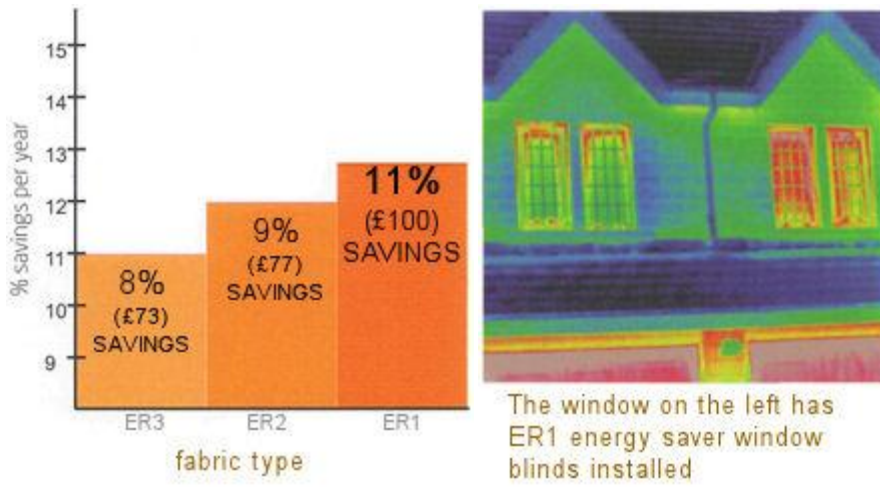

### **Saving you money! Thermal efficient window blinds**

Each of our vertical blind fabrics has been tested and given an energy saving classification of ER1, ER2 or ER3 to give an indication of the cost savings that can be achieved\*.

- ER1: - High level of insulation and energy savings of up to 11% per year can be achieved with these fabrics.
- ER2: - These fabrics provide a good level of insulation and energy savings of up to 9% per year can be achieved with these fabrics.
- ER3: - These are the essential fabrics for window furnishings and energy savings of up to 8% per year can be achieved with these fabrics.

In addition to saving money every year, the use of blinds with these fabrics will reduce the carbon footprint of your home.

Potential home energy savings using our vertical blind fabrics

## HOW TO MEASURE FOR VERTICAL BLINDS

Advice on how to purchase the correct size vertical blinds.

### BLIND MEASUREMENTS

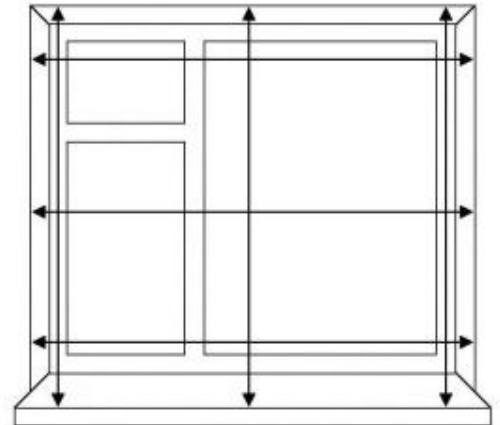

Blinds may be fitted either inside or outside the window recess. When deciding whether to fit the blind inside or outside the recess, consider the following points: -

It will be necessary to fit the blind outside the recess if: -

- The recess is less than 7.5cm deep
- The window opens inwards
- The window is not straight (width or height varies by more than 2cm)

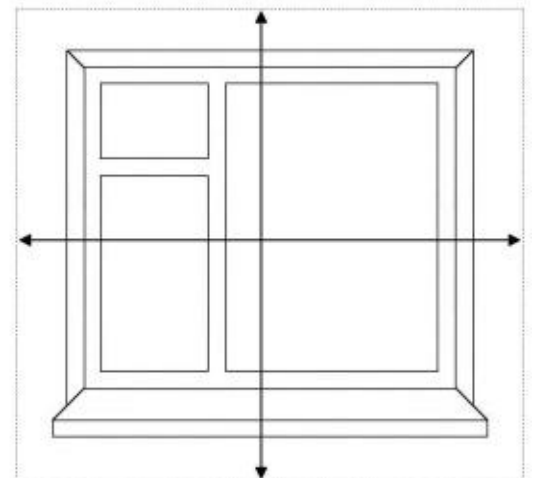

#### Measuring for a blind to fit inside a window recess: -

- Always use a metal tape
- Measure the width (wall to wall) and drop in at least three positions taking account of any protrusions such as tiles, dado rails etc.
- Make a note of the **smallest** width and drop measurement and quote these as the **Recess Size**. We will deduct 0.5cm for fittings.
- All blinds are supplied on a track cut to the exact width complete with fixtures and fitting instructions.

#### Measuring for a blind to fit outside a window recess: -

- Always use a metal tape
- Measure for the width and drop. We would recommend that you allow the blind to extend a minimum of 10cm either side of the window and 10cm above and below the window.
- Make a note of the required width and drop measurement and quote these as the **Blind Size**. **Your louvres will measure 5cm less than the overall drop quoted to take account of the headrail fitting and clearance from the sill.**
- All blinds are supplied on a track cut to the exact width complete with **face** fixtures for outside recess only and fitting instructions.

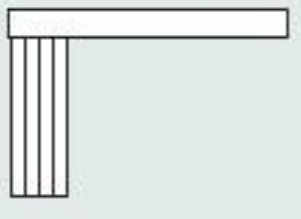

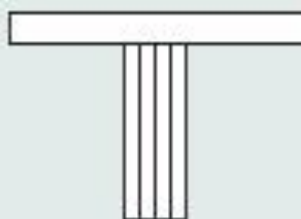

**ORDERING FORM**

Use the form below to write down all the information you'll need to order our Vertical Blinds. To print off more than 1 copy only print pages 4 to 7 and choose how many copies you require).

STAGE 1 ENTER YOUR SIZE INFORMATION

OPTION	YOUR SELECTION	HELP
